

Shared Hosting

Shared hosting means that your application will share space with other business applications. There are some limitations to what you can and cannot do based on installed packages, and your particular application needs. This is our most economical option for low to medium traffic and server load, and less complex application requirements.

Our shared hosting plans include:

- 5 to 20 GB storage space
- Email accounts @ your domain
- Email forwarding
- Linux or Windows OS
- MSSQL or MySQL database options
- Web site statistics
- Customizable control panel
- 24x7 Support

We can price out a solution for you on a month-to-month basis, or set you up with a 6, 12, or 24-month agreement to save you money. All shared hosting plans are billed at the beginning of each month.

Contact us for a price quote, or to go over your requirements.
